

Blindside Is Not a Negative Side Waterproofing Application

Features	Blindside	Negative Side
• Pre-applied to exterior face of foundation wall or under slab		
• Applied to interior face of foundation wall or floors		
• Primarily below-grade new construction		
• Primarily restoration construction		
• Prevents water intrusion into building while protecting building's structural components		
• Prevents water intrusion into building's interior space but does not protect building's structural components		
• Common system technologies include sodium bentonite, mechanically bonded sheet and fully-adhered sheet		
• Resistant to contaminants in groundwater, soil and soil vapor		
• Waterproofing system accessible for repairs after installation
