## **No primer for some 705 VP installations**

*Faster and easier installation times!*

July 27, 2018, Wylie, Texas - CCW Fire Resist 705 VP vapor permeable sheet air barrier system is now faster and easier to install thanks to the elimination of primer in some installations.

"Primer-less" installation means Fire Resist 705 VP can be applied directly to approved substrates without the need to prepare the surface with CCW contact adhesive. Primer-less installation is permitted in mild weather conditions on a variety of common exterior wall sheathing materials.

CCW continues to offer CAV-GRIP, Travel-TACK and 702 WB vapor-permeable contact adhesives for Fire Resist 705 VP installation over concrete and masonry substrates and installation in cold weather.

Please consult the latest [Fire Resist 705 VP Product Data Sheet](#) for detailed information.
