## CCW discontinues Barritape

Carlisle Coatings & Waterproofing is discontinuing the manufacture of Barritape, a pressure-sensitive asphalt/poly flashing tape historically recommended for detailing sheathing joints in the Barriseal air and vapor barrier system.

CCW cited low sales volume and the availability of more user -friendly options as reasons for discontinuation. Barritape will be available as long as inventory lasts but will be discontinued once supply is exhausted.

CCW recommends the following as replacements for Barritape (SAP# 310449, 4"x100' 12/CTN)

SAP #	Description
325918	BARRIBOND 20 OZ SAUSAGE 16/CTN
304987	FABRIC 4" X 100' 100 SF

### Remaining Barriseal system options for detailing sheathing joints:

Option 1: apply a ribbon of BarriBond (a caulking sealant), centered over the joint.

Option 2: embed and encapsulate DCH Reinforcing Fabric into Barriseal, with fabric centered over joint.

*(Please perform either detail and all CCW product installation according to the latest published instructions and drawings.)*
